## Skills

- [Coloque na frente as principais. Exemplo:] **JavaScript, TypeScript, React, React Native**, Redux, Context API, Redux Saga, Redux Thunk
- **Node.js, Express, NestJS**, Unit Testing & Integration Testing (TDD), AWS, CI/CD, Lambda, Docker, Kafka, Kubernetes, SQL & NoSQL
- Languages: Portuguese (native), English (advanced level)

## Experience

| Cargo (Ex:Frontend Engineer) | Nome da Empresa | Cidade,País<br>(Remote) | 03/2024 – Current |
|------------------------------|-----------------|-------------------------|-------------------|
|------------------------------|-----------------|-------------------------|-------------------|

Aqui você irá colocar um breve **resumo da empresa, negócio, produto ou equipe específica que você trabalhou**, isso irá dar contexto ao leitor. Pode verificar os exemplos que colocarei abaixo.

- Nestes tópicos você deverá descrever:
- Responsabilidades
- Poderá mencionar melhorias, migração, manutenção, iniciativa, desafio técnico, etc
- Pode descrever também resultados, como por exemplo, aumentamos a cobertura de testes de 40% para 80%

**Tech Stack:** adicione aqui as tecnologias utilizadas nesta experiência, como linguagens, frameworks, banco de dados, serviços de Cloud, ferramentas de monitoramento, ferramentas de teste, IA, etc.

|                            |             |                        |                   |
|----------------------------|-------------|------------------------|-------------------|
| Senior Full Stack Engineer | <u>NOAH</u> | London, UK<br>(Remote) | 07/2023 - 03/2024 |
|----------------------------|-------------|------------------------|-------------------|

NOAH is a fintech platform focused on digital payments and cross-border transactions, leveraging cloud-native architecture, APIs, and event-driven systems for scalable financial infrastructure.

- **Led the development and implementation of a comprehensive notification system** to enhance user engagement and interaction within the platform. Leveraged AWS EventBridge, SQS & Lambda to orchestrate seamless communication between various systems, ensuring timely and personalized notifications for users.
- **Collaborated closely with cross-functional teams, particularly the marketing department**, to understand user behavior patterns and tailor notifications accordingly, resulting in a noticeable increase in user retention and satisfaction metrics.
- Actively participated in system requirement elicitation, design workshops, and architecture discussions, **offering valuable insights and proposing solutions to enhance system scalability, performance, and maintainability.**
- **Mentored junior team members**, providing guidance on best practices, code reviews, and technical troubleshooting, fostering a collaborative and learning-oriented team culture.
- Actively participated in knowledge-sharing sessions, workshops, and tech talks within the organization, **promoting continuous learning and skill development among team members.**

**Tech Stack:** TypeScript, Node.js, React, AWS (Lambda, SQS, EventBridge), Jest, and Copilot.

|                               |            |                           |                   |
|-------------------------------|------------|---------------------------|-------------------|
| Mid-Level Full Stack Engineer | <u>Zak</u> | São Paulo, BR<br>(Hybrid) | 03/2022 – 07/2023 |
|-------------------------------|------------|---------------------------|-------------------|

Zak is a technology platform for restaurants, providing an all-in-one system to manage operations, orders, and payments.

- Led the development of two enterprise-level front-end applications of the Customer Onboarding department E2E, from identifying system requirements to workload balancing and metrics collection, improving the onboarding time process by 25% and the CAC by 45% using modern technologies like **Micro-Frontends, TypeScript, React, GraphQL, AWS & Postgres**, achieving a 95% test coverage in both projects.
- Led the implementation of a Micro-Frontend-based architecture across three enterprise-level front-end projects within the company using **TypeScript, React, Webpack & Module Federation**, improving the development time & experience.
- Worked in the **largest microservice within the company**, processing more than **1 million Kafka messages per day**. Participated in technical, system requirements discussions and in implementing new consumers, services & APIs using **Node.js & TypeScript**.
- Participated heavily in the development of systems following the **EDA (Event Driven Architecture)**, including scalable APIs built with **Clean Architecture & SOLID principles**, using modern technologies like **Node.js, TypeScript, Kafka & Kubernetes**.
- Continuous Integration/Deployment Pipeline Integration, pull requests, code reviews, load/stress testing, unit/integration/e2e testing

**Tech Stack:** Micro-Frontends, TypeScript, React, Node.js, GraphQL, AWS, Postgres, Webpack, Module Federation, Kafka, and Kubernetes.

Junior Full Stack Engineer

Seidor

São Paulo, BR 11/2020 - 03/2022  
(On-site)

*Seidor is a global technology consulting company. I was allocated to one of the biggest breweries in Brazil (Grupo Petrópolis).*

- Participated in the **development of a full-stack platform (web & mobile)** to one of the biggest breweries in Brazil which processed more than 20.000 orders per day..
- Designed and developed systems facilitating the brewery's employees to capture feedback from their customers (via surveys), which turned out to be a **major achievement for the company** in order to track customer general satisfaction.
- Led the implementation of E2E tests in the mobile and web applications using Detox & React Testing Library.
- Had a close relationship with the client, participating actively in system requirements, design & architecture discussions.

**Tech Stack:** TypeScript, NestJS, React, React Native, Redux, AWS, Detox, and React Testing Library.

## Projects

---

Acelera+

[Github](#)

- Designed and developed a **full-stack mobile application** that allows users to create and participate in championships in virtual motorsport games, using technologies like **Node.js, TypeScript, React Native, Redux, MongoDB, AWS & Firebase**.
- **TDD** methodology applied to the front-end and back-end, achieving more than 80% test coverage in both; applied **Clean Architecture** principles to the back-end codebase.
- Continuous Integration/Deployment Pipeline Integration with deploy to [App Store](#) & [Google Play](#) (via Expo).

## Education

---

- Bachelor's Degree in Computer Science at Universidade Federal de Santa Catarina

## Certifications

---

- [aqui você pode tanto adicionar certificações tipo AWS, mas também cursos de curta duração que você fez como da Udemy]
- Big Data Foundations - Level 1 at IBM
- Scrum Foundation Professional Certificate at Certiprof
